

DAIRY INTELLIGENCE

FROM MILK RECEIPT TO RECORD.

Integrated collection technology for faster testing, transparent payouts and cleaner records.

DAIRY COLLECTION SOLUTIONS

Purpose-built combinations of weighing, ultrasonic analysis, sample stirring, printing and data processing.

Make every pour accountable.

Receive

Capture producer and batch details before the sample enters the workflow.

Weigh

Record quantity with a stable dairy-ready weighing configuration.

Analyze

Measure key milk quality parameters with a suitable ultrasonic analyzer.

Calculate

Apply configured rate logic consistently and transparently.

Print

Issue a clear transaction record at the point of collection.

Sync

Move data into the cooperative's operating and reporting process.

WHY IT MATTERS

A connected workflow reduces re-entry, improves traceability and gives members a clearer transaction experience.

DEPLOYMENT CHECKLIST

Design a smarter collection point

01

Map peak volume

Estimate members per shift, sample throughput and required turnaround time.

02

Choose parameters

Confirm the quality measurements and rate-chart logic used by the dairy.

03

Plan connectivity

Define printer, DPU, network, export and backup requirements.

04

Train operators

Standardize sampling, cleaning, verification and end-of-day routines.

Modernize your milk collection workflow
